Premium Sod Installation Guide

A professionally written homeowner guide designed to help clients understand our premium sod installation process, watering schedule, maintenance recommendations, and long-term lawn care best practices across Kitchener, Waterloo, and Cambridge.

1. Old Sod Removal

We begin by removing the existing lawn using professional sod-cutting equipment rather than rototilling. This prevents old weeds and unhealthy root systems from mixing into the fresh soil, helping create a cleaner and healthier foundation for your new lawn.

2. Premium Soil Installation

Fresh screened topsoil is supplied and professionally graded to improve drainage, root development, and long-term lawn health. Proper soil preparation is one of the most important steps in achieving a thick, vibrant lawn.

3. Sloping & Grading

Our team carefully smooths and grades the surface to eliminate uneven areas, improve drainage, and create a clean finish before installation begins.

4. Fertilizer Application

A premium starter fertilizer is applied to support healthy root establishment and encourage strong early growth after installation.

5. Fresh Sod Installation

We install high-quality Kentucky Bluegrass sod cut fresh from trusted sod farms. Each roll is installed tightly and professionally to create a seamless, luxurious lawn appearance.

6. Rolling The New Lawn

A heavy lawn roller is used after installation to improve sod-to-soil contact, remove air pockets, and help create a smooth and level surface.

7. Watering Guidelines

The first watering is critical. Newly installed sod must remain consistently moist during the first few weeks to encourage proper root establishment and long-term lawn success.

8. Sod Warranty

Everstone Outdoor Living stands behind the quality of our work. We provide warranty support for properly maintained sod installations and guide homeowners through the recommended care process.

Recommended Watering Schedule

- Week 1: Water deeply 2–3 times daily to keep the soil consistently moist.
- Week 2: Reduce watering frequency while increasing watering depth.
- Week 3: Transition toward a regular lawn watering routine.
- Avoid overwatering, puddling, or allowing the sod to dry out completely.

Mowing & Lawn Care Tips

Wait approximately 6–7 days before the first mow depending on weather conditions and root establishment. Use sharp mower blades and avoid removing more than one-third of the grass blade height during any single cut.

Frequently Asked Questions

Question	Answer
How soon should I water new sod?	Immediately after installation and consistently during the first few weeks.
When can I mow the new lawn?	Typically within 6–7 days depending on weather and root development.

What type of sod do you install?	Premium Kentucky Bluegrass suited for Ontario climates.
Do you provide warranty support?	Yes, we guide homeowners through proper care and support healthy installation
